PROFILE

Full-stack software engineer and founder with **6+ years of experience building and operating production systems** across property technology, logistics, fintech, SaaS, and regulated customer experience.

I work across the entire product lifecycle—from PostgreSQL data modelling and backend architecture to frontend systems, infrastructure, and the customer experience. I have built systems used by **250,000+ users, 100+ enterprise clients, and platforms processing millions of transactions daily**.

Currently founder and principal engineer at **Denhunt Ltd**, where I own product direction, architecture, and engineering for a property operations platform and marketplace serving Nigerian shortlet and hostel businesses.

I focus on building systems that remain correct under real-world conditions, designing business rules into the architecture rather than relying solely on application logic, and shipping software that produces measurable business outcomes.

EXPERIENCE

Founder & Principal Engineer

Denhunt Ltd · Lagos, Nigeria
2025 – Present

Founded and lead Denhunt, a property operations platform and marketplace for Nigerian shortlet and hostel businesses. Own product strategy, technical architecture, engineering delivery, and platform operations across the operator application, guest marketplace, and internal administration systems.

- Architected the platform around **PostgreSQL and Supabase**, enforcing critical business invariants at the database level rather than relying solely on application logic.
 - Built the core operator platform from the ground up, covering **bookings, unified availability, payments, expenses, staff management, housekeeping, guest messaging, and subscription billing**.
 - Designed a single-source-of-truth architecture where marketplace listings are directly connected to the operational record, preventing published availability and pricing from silently diverging from business data.
 - Implemented database-level booking constraints to make **double bookings structurally impossible**.
 - Modelled payments as an **append-only financial ledger**, preserving a complete audit trail while ensuring corrections never overwrite historical transactions.
 - Built hostel-specific functionality for **session-based occupancy, individual bed-space inventory, and installment payment plans**.
 - Designed role-based access controls allowing businesses to restrict staff access by property, responsibility, and operational role.
 - Developed subscription tiers supporting businesses managing **5–100 units**.
 - Authored the product specification suite covering platform architecture, operator workflows, marketplace functionality, administration, and design systems.
 - Took the product from a blank repository to a working platform with a **published marketplace, operator application, staff permissions, and subscription infrastructure**.
-

Full-Stack Engineer, Contract

ManzillQ · Dubai, UAE

Apr 2026 – Jul 2026

Joined on a three-month contract and independently designed, built, and deployed the platform end to end for a Dubai property investment intelligence company.

- Built and deployed the complete product independently across both **frontend, backend, architecture, and production infrastructure**.
- Delivered a live platform serving **2,000+ users** in the Dubai property market.
- Contributed to a **70% increase in company revenue** through the delivery and expansion of the platform.
- Built the frontend with **Next.js, TanStack Query, Zustand, and shadcn/ui**.
- Designed and implemented the backend using **Express and PostgreSQL**, with Redis caching and WebSocket-based real-time updates.
- Integrated **Stripe billing, Google OAuth, Twilio, Resend, and Google Analytics**.
- Built property investment analytics covering ROI analysis, portfolio monitoring, property scoring, property comparison, and market research.
- Implemented interactive data visualisation using **ECharts and Recharts**.

- Integrated Google Maps for property and community-level geographic analysis.
 - Built server-side PDF generation for investment reports.
 - Delivered **English and Arabic localisation**, including full right-to-left interface support.
 - Hardened the API with **Helmet, rate limiting, request validation, and operational monitoring**.
 - Established Slack-based operational alerts and analytics reporting for production visibility.
-

Lead Full-Stack Engineer

PikaGroup Technologies · London, Remote
Jan 2022 – Present

Lead full-stack engineering for a B2B SaaS platform serving **100+ enterprise clients and processing 2M+ daily transactions**.

- Led the development and evolution of a large-scale B2B SaaS platform across frontend, backend, infrastructure, and data systems.
 - Designed and led the migration from a monolithic architecture to **serverless microservices**, reducing infrastructure costs by **35%**.
 - Improved dashboard performance by **60%** through server-side rendering, memoisation, dynamic imports, and frontend architecture improvements.
 - Led adoption of a design system using **Storybook and atomic design**, reducing interface inconsistencies by **40%**.
 - Implemented real-time analytics pipelines using **AWS Kinesis**.
 - Mentored **5+ junior engineers**, introducing structured code review standards and engineering practices.
 - Contributed to architectural decisions around scalability, reliability, observability, and production operations.
-

Full-Stack Developer

DevHeit · London, Remote
May 2019 – Dec 2021

- Built backend systems for an **AI-powered e-learning platform supporting 250,000+ users**.
- Designed and implemented REST and GraphQL APIs with secure authentication and authorisation.
- Refactored a legacy frontend into React, reducing codebase size by **37%**.

- Implemented an offline-first PWA architecture capable of operating reliably in low-connectivity environments, achieving **99.5% uptime**.
 - Designed CI/CD pipelines that reduced deployment time by **70%**.
-

Full-Stack Developer

Softnotch · Nigeria

Aug 2017 – Mar 2019

- Built APIs for a real estate platform managing **40,000+ property listings and 100,000+ daily API requests**.
 - Designed booking workflows containing complex availability and business logic.
 - Implemented secure payment workflows and transaction handling.
 - Built image upload and optimisation infrastructure using **AWS S3 and Lambda**.
 - Developed dynamic landing pages and reusable interface components, contributing to an **18% improvement in conversion**.
-

SELECTED PRODUCTS & PROJECTS

Denhunt

Founder & Principal Engineer · Property Operations & Marketplace

A property operations platform and marketplace built for Nigerian shortlet and hostel businesses.

Core systems: PostgreSQL, Supabase, Next.js, TypeScript, React, TanStack Query, Zustand, shadcn/ui.

ManzillQ

Full-Stack Engineer · Dubai Property Investment Intelligence

Property investment intelligence platform providing ROI analysis, portfolio monitoring, property scoring, comparisons, market data, and research tools for Dubai investors.

Core systems: Next.js, Express, PostgreSQL, Redis, WebSockets, ECharts, Recharts, Google Maps, Stripe.

Send24

Full-Stack Engineer · Logistics & Shipping

Customer-facing logistics platform for a nationwide Nigerian delivery service built around hub-based logistics.

- Built shipment booking and tracking workflows.
- Worked across a **Next.js** frontend, **Laravel/SQL** backend, and **SwiftUI iOS application**.
- Designed pricing and tracking interfaces that simplified complex hub-based logistics for customers.

Fazn

Founder & Engineer · Digital Product & Engineering Studio

Built and operated a digital product studio focused on engineering and client product development.

- Built the studio's marketing platform with **Next.js**, **GSAP**, and **Three.js**.
- Designed an animation-heavy product experience while maintaining a modern frontend architecture.

Lex Legal

Full-Stack Engineer · Legal Services Marketplace

Built a legal services marketplace connecting clients with legal professionals.

- Implemented the **Next.js** frontend and **SQL** data model.
- Integrated **Stripe payment workflows**.
- Developed supporting **Python** services.

TECHNICAL SKILLS

Frontend

React · Next.js · TypeScript · JavaScript · Redux · Zustand · TanStack Query · Tailwind CSS · shadcn/ui · Framer Motion · Vue.js · Nuxt

Backend & APIs

Node.js · Express · Python · Django · FastAPI · Flask · Go · REST · GraphQL · WebSockets · Microservices

Databases & Data

PostgreSQL · Supabase · MySQL · MongoDB · DynamoDB · Redis · Elasticsearch · Database Design · Row-Level Security

Cloud & Infrastructure

AWS · Lambda · EC2 · RDS · S3 · API Gateway · Kinesis · Docker · Kubernetes · Terraform · Vercel · GitHub Actions · Jenkins

Integrations

Stripe · Twilio · Resend · Google OAuth · Google Maps Platform · Google Analytics Data API · Slack API

Testing & Observability

Jest · Cypress · Pytest · Go Test · k6 · Artillery · Postman · Prometheus · Grafana

Product & Engineering

Figma · Storybook · Design Systems · WCAG Accessibility · Agile · Jira · System Architecture · Performance Engineering

EDUCATION

BSc, Computer Science

University of Lagos · Nigeria

2019 – 2024

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Google Cloud Professional Cloud Architect
- Certified Kubernetes Application Developer (CKAD)

- Docker Certified Associate
 - Meta Front-End Developer
 - Google UX Design
-
